Deliver Better Outcomes for the Public Through Powerful Finance

An empowered, analytical finance team—one that delivers timely, powerful insights to drive better decision-making—can be a local government's greatest strategic asset. But many finance functions are too overwhelmed with labor-intensive, spreadsheet-based processes and various ad-hoc queries to find time for analysis. With the current rate and volume of transformative change in the public sector, inefficient or error-prone manual financial processes have become a serious liability.

Our tools are specifically designed to keep your department agile, efficient, and transparent through reforms to outcomes-based budgeting and reporting. insightsoftware enables government finance functions to generate real value for the business and for the public.

Liberating Finance

insightsoftware eliminates the frustrations of Excel Hell and empowers finance teams with the tools and time to produce strategic data insights. By leveraging automation to increase efficiency, the Department of Regional New South Wales (DRNSW) has halved its monthly reporting cycle and is now able to drive operational cost reductions throughout the cluster. The tool empowers the whole of DRNSW with self-service analytics, helping users in all areas of the business arrive more efficiently at data-driven decisions.

"The intuitive and customisable solution means I don't spend money on consultants writing reports, I can have my own internal people do that very effectively at a significantly lower cost."
Angus Begg, CFO, DRNSW

Getting More Out of Your Data and Team.

Transform the relationship between your business and its data, both financial and operational. insightsoftware's low barrier to entry means non-finance staff can also input, slice and dice, understand, and report on data that is important to their function. Create a virtuous cycle of curiosity and understanding by empowering your whole organisation. Help users in all areas of the business arrive at faster, data-driven decisions.

"Trying to budget a multi-faceted organisation using spreadsheets wasn't working – it's impossible to get a consolidated result. Our manual systems were resource hungry, and vulnerable to human error and all the usual problems with Excel."
Cathi Johnson, Manager Systems Accounting, Villa Maria Catholic Homes

Speed and Accuracy Through Automation

Our robust budgeting and reporting solution will reduce frustrating errors by ensuring your whole team is working with the same set of numbers in a single source of truth. By leveraging insightsoftware, community housing provider Haven Home Safe saved hundreds of hours with reporting automation and can now publish complex trial balances in a matter of seconds.

"The process efficiency has been astronomical. It's been a game-changer for finance to have a tool that can grab this data and produce meaningful results so fast."
Andrew Chittenden, Finance Manager, Haven Home Safe
